Standard charger

Simultaneous Talk

Replacement Battery

Ultra LITE are breakthrough full duplex wireless headsets that provide hands-free, two-way voice communications. At the heart of these systems is a specialty "Master" headset that relays the digital signals generated by up to three "Remote" units. The resulting open line talking pattern allows up to 4 people to talk simultaneously without pushing buttons. To formulate your standard UltraLITE system select any combination of Double or Single ear headsets - up to 4 units. Recently the HB version up to 5 persons without HUB and up to 9 persons with HUB

Standard UltraLITE™ intercoms provide instantaneous wireless communications to crews that need to work with their hands. These revolutionary wireless eclipse all other full duplex headsets for performance and convenience because the transceiver is built right inside the earcup. This self-contained "All-In-One" design eliminates wires and belt worn radios. UltraLITE™ do not require a base station allowing users to remain in constant full duplex voice contact even while on the move.

THE HUB

Mini Duplex Base

The HUB is a wearable Mini Base that expands the capacity of UltraLITE wireless headsets for larger crews that need to communicate and work with their hands and work with their hands. This compact transceiver weighs only 9 oz and can either be placed strategically "on location" or belt worn. When clipped comfortably to the user's waist it moves seamlessly with your group allowing UltraLITE headsets to remain connected in fully duplex. The HUB can be used as the seventh full duplex transceiver with addition of an Eartec plug-in headset.

OUTSTANDING RANGE
